Offic Action Summary						

Art Unit 1771

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

-2-

- 2. The use of the trademark MEOCRYL CX-100 previously set forth in paragraph No. 1 of Paper No. 3 is again noted in this application as failing to contain suitable generic terminology of its composition. Applicants have traversed this objection, but their response is not seen to address the merits of the Examiner's position and accordingly it is hereby repeated.
- 3. Claims 1-16 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicants regard as the invention. More particularly, the Examiner repeats his rejection set forth in paragraph No. 3 of Paper No. 3 that it is confusing to use both "wt%" and "parts" without further identification in the same claim. The fact that each type of terminology has been often utilized in the chemical arts is simply irrelevant to the issue as presented by the Examiner.
- 4. Claims 1-16 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Ishiwata et al. -473 (Ishiwata et al. -242 is again cumulative), substantially for the reasons set forth in paragraph No. 7 of Paper No. 3, together with the following additional observations. Applicants argue (Response, page 6, first paragraph) that the Examiner has provided no evidence that such free radical initiators as claimed by

Art Unit 1771

applicants are well known to one of ordinary skill in the art Accordingly, the Examiner notes that EP 0981156A2, cited as evidence of the state of the art, discloses (e.g. Example 4 at paragraph (0064) at page 7) a very closely related adhesive composition to that claimed by applicants, lacking only a different range of proportions of the various ingredients, and clearly teaches the utilization of the thermally stable free radical polymerization initiator IRGACURE 184, taught by applicants' specification at page 13, line 2 as being one of their most preferred initiators, as particularly suitable in their radiation curable pressure sensitive adhesive composition. Accordingly, it is respectfully submitted that the Examiner has clearly met his burden of disclosing that such thermally stable free radical initiators are well known in the acrylic radiation detackifiable adhesive composition art.

Additionally, the Examiner further notes applicants' contention (Response, page 6, second paragraph) that Ishiwata et al. -473's teaching of the claimed range of proportions at column 8, lines 1-3 "appears in contradiction" to various other teachings of the reference. However, there is no question that the reference clearly and unambiguously teaches this particular range of proportions which reads upon applicants' claimed range, and accordingly whether or not it is correct does not negate the fact that it is clearly set forth as an enabling teaching in the

Serial No. 10/015,006

Art Unit 1771

reference. Additionally, it is further believed that such parameters are obvious optimizations to one of ordinary skill.

- 5. Claims 1-16 are again rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,472,065B1, substantially for the reasons set forth in paragraph No. 9 of Paper No. 3, together with the following additional observations. Applicants argue essentially only what they have argued in the previous paragraph, i.e. that a selection of a suitable thermally stable free radical initiator is not within the skill of the art as the Examiner contends. However, as was set forth above, the aforementioned teachings of EP -156 as cited evidence of the state of the art regarding photopolymerization initiators are believed to clearly overcome applicants' position.
- 6. THIS ACTION IS MADE FINAL. Applicants are reminded of the extension of time policy as set forth in 37 C.F.R. § 1.136(a). The practice of automatically extending the shortened statutory period an additional month upon the filing of a timely first response to a final rejection has been discontinued by the Office. See 1021 TMOG 35.

A SHORTENED STATUTORY PERIOD FOR RESPONSE TO THIS FINAL ACTION IS SET TO EXPIRE THREE MONTHS FROM THE DATE OF THIS ACTION. IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION

Art Unit 1771

IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL EXPIRE ON THE DATE THE ADVISORY ACTION IS MAILED, AND ANY EXTENSION FEE PURSUANT TO 37 C.F.R. § 1.136(a) WILL BE CALCULATED FROM THE MAILING DATE OF THE ADVISORY ACTION. IN NO EVENT WILL THE STATUTORY PERIOD FOR RESPONSE EXPIRE LATER THAN SIX MONTHS FROM THE DATE OF THIS FINAL ACTION.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Zirker whose telephone number is (703) 308-0031. The examiner can normally be reached on Monday-Thursday from 8:30 A.M. to 6:00 P.M. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris, can be reached on (703) 308-2414. The fax phone number for this Group is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.
